**Estimated national HIV prevalence among persons 15-49 years of age, December 2007**

**Estimated number of people living with HIV and adult HIV prevalence  
Global HIV epidemic, 1990–2007; and, HIV epidemic in Sub-Saharan Africa, 1990–2007**

**Global HIV epidemic, 1990–2007**

**HIV epidemic in Sub-Saharan Africa, 1990–2007**

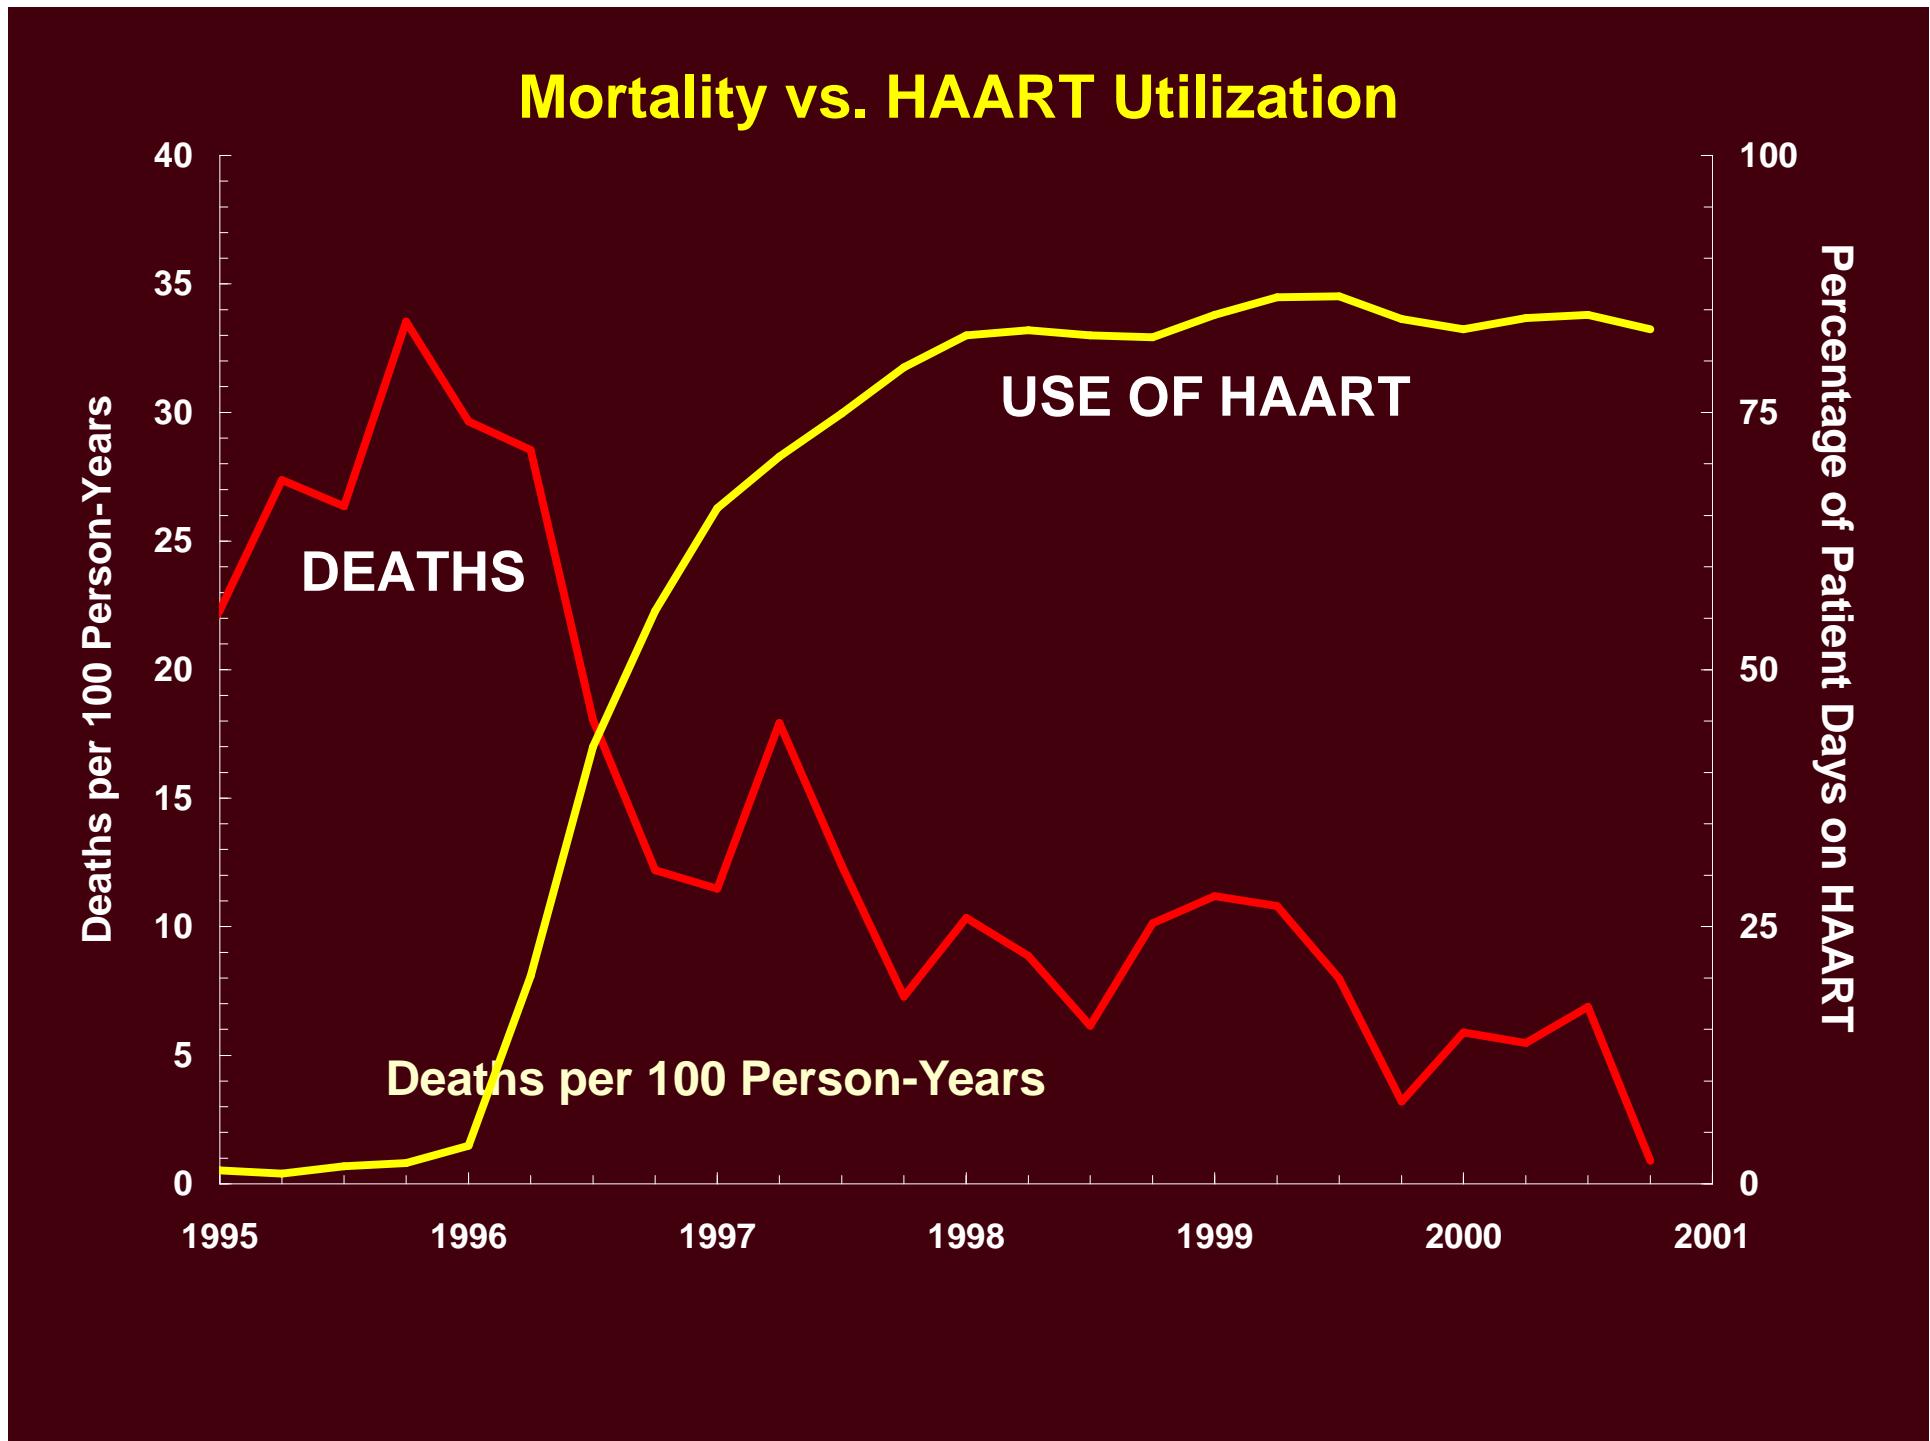

■ Number of people living with HIV

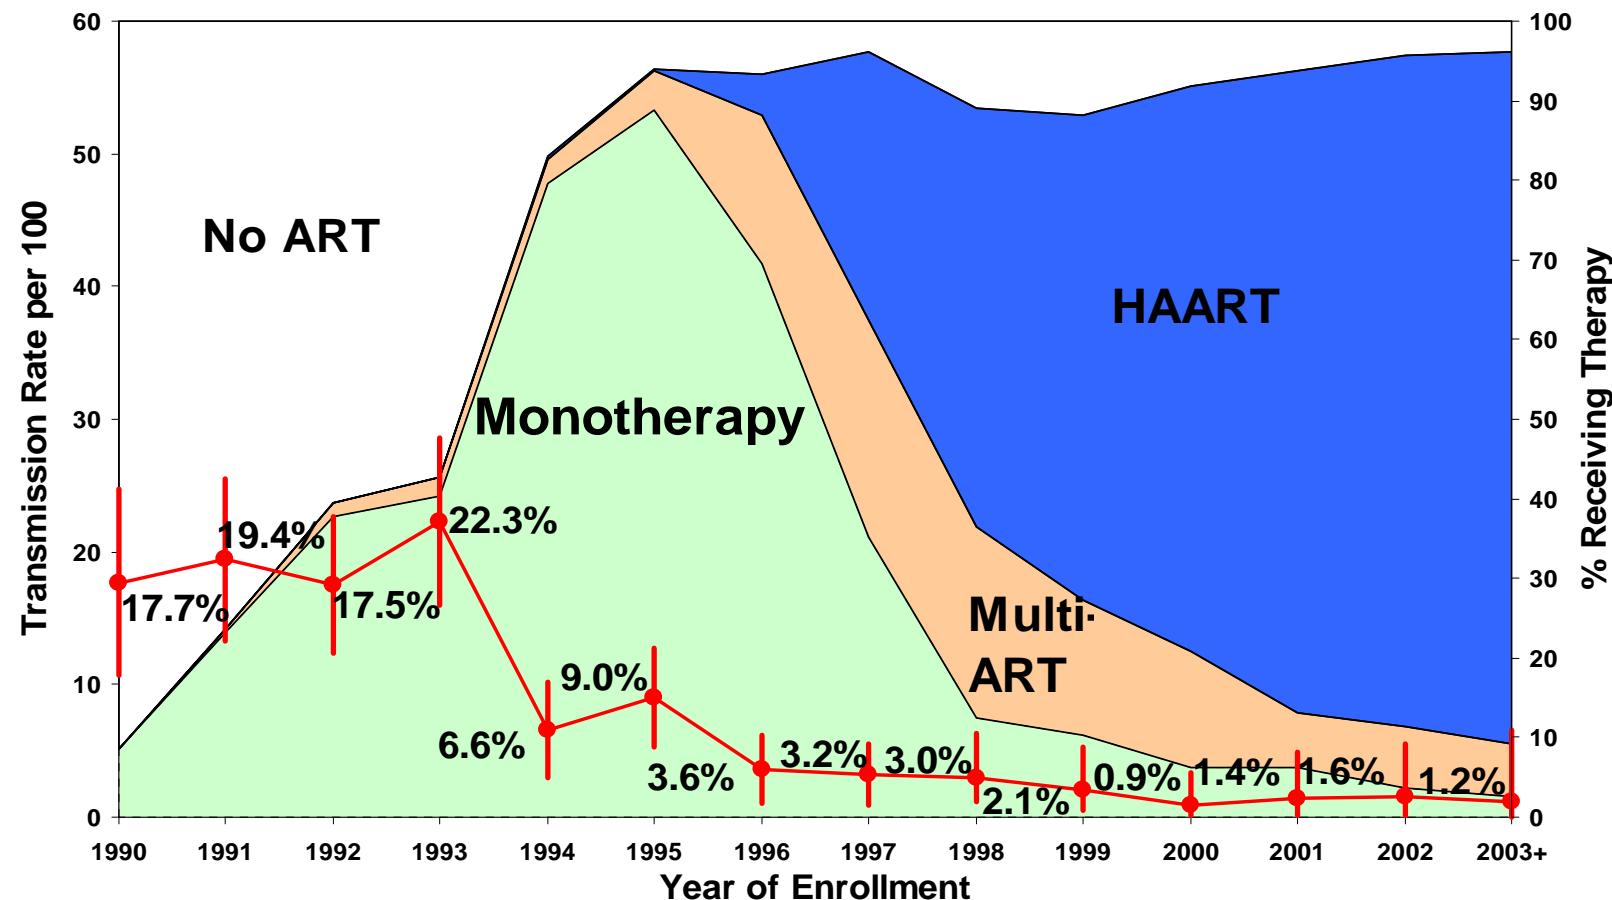

● % HIV prevalence, adult (15–49)

[ ] These bars indicate the range around the estimate

NOTE: Even though the HIV prevalence stabilized in Sub-Saharan Africa, the actual number of people infected continues to grow because of ongoing new infections and increasing access to antiretroviral therapy.

# HIV-1 Entry Inhibitors

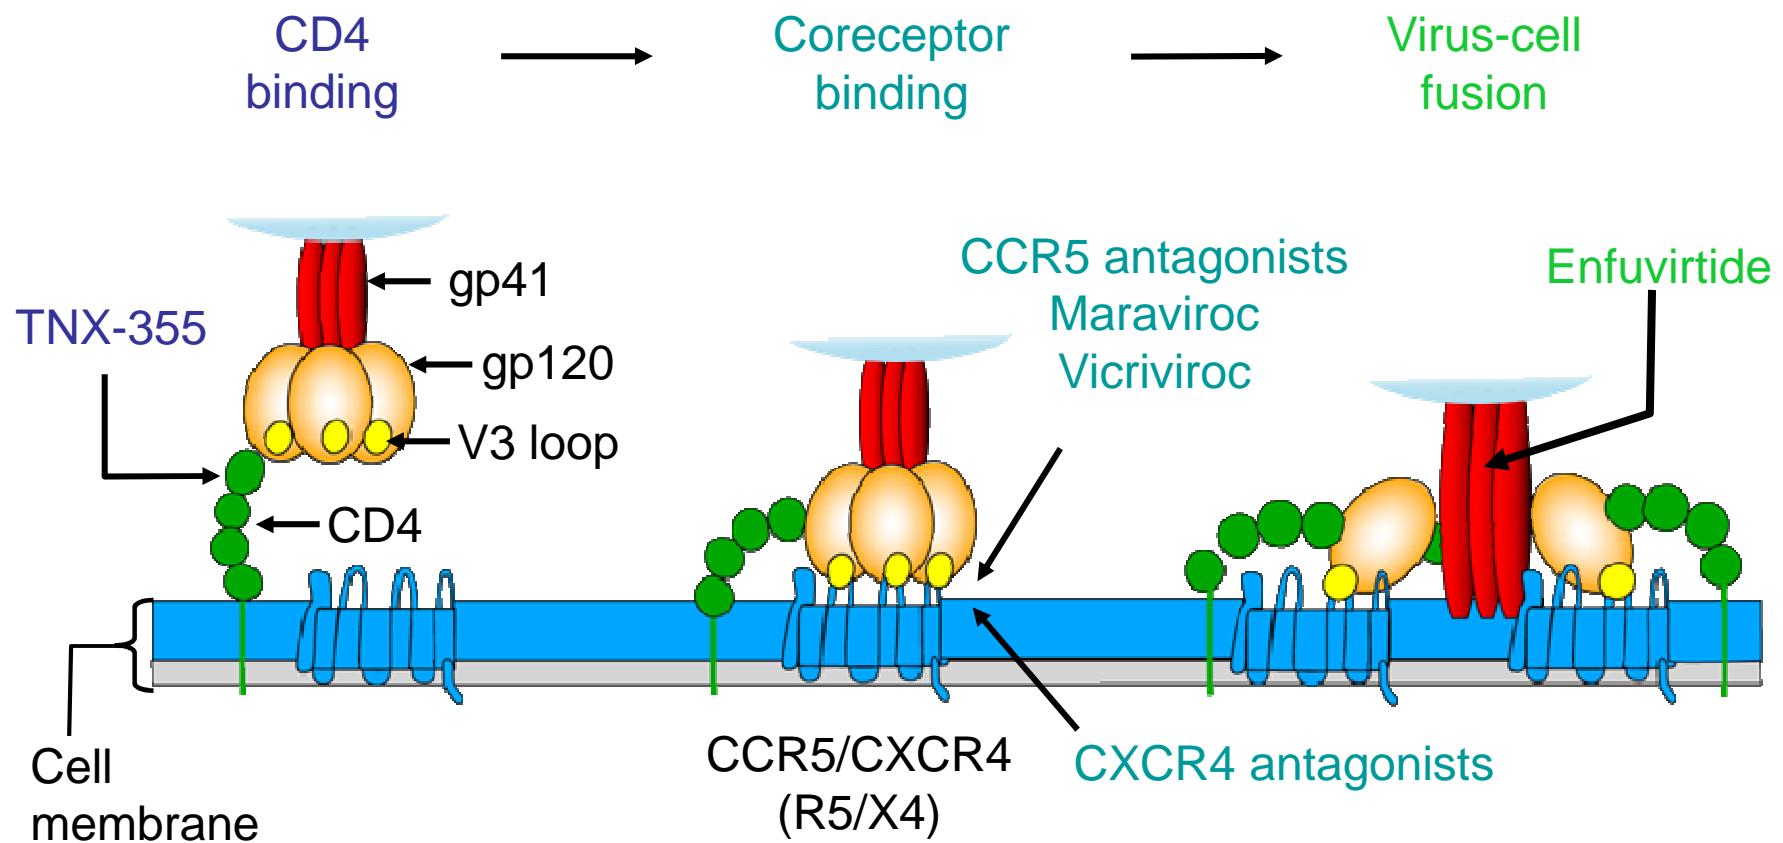

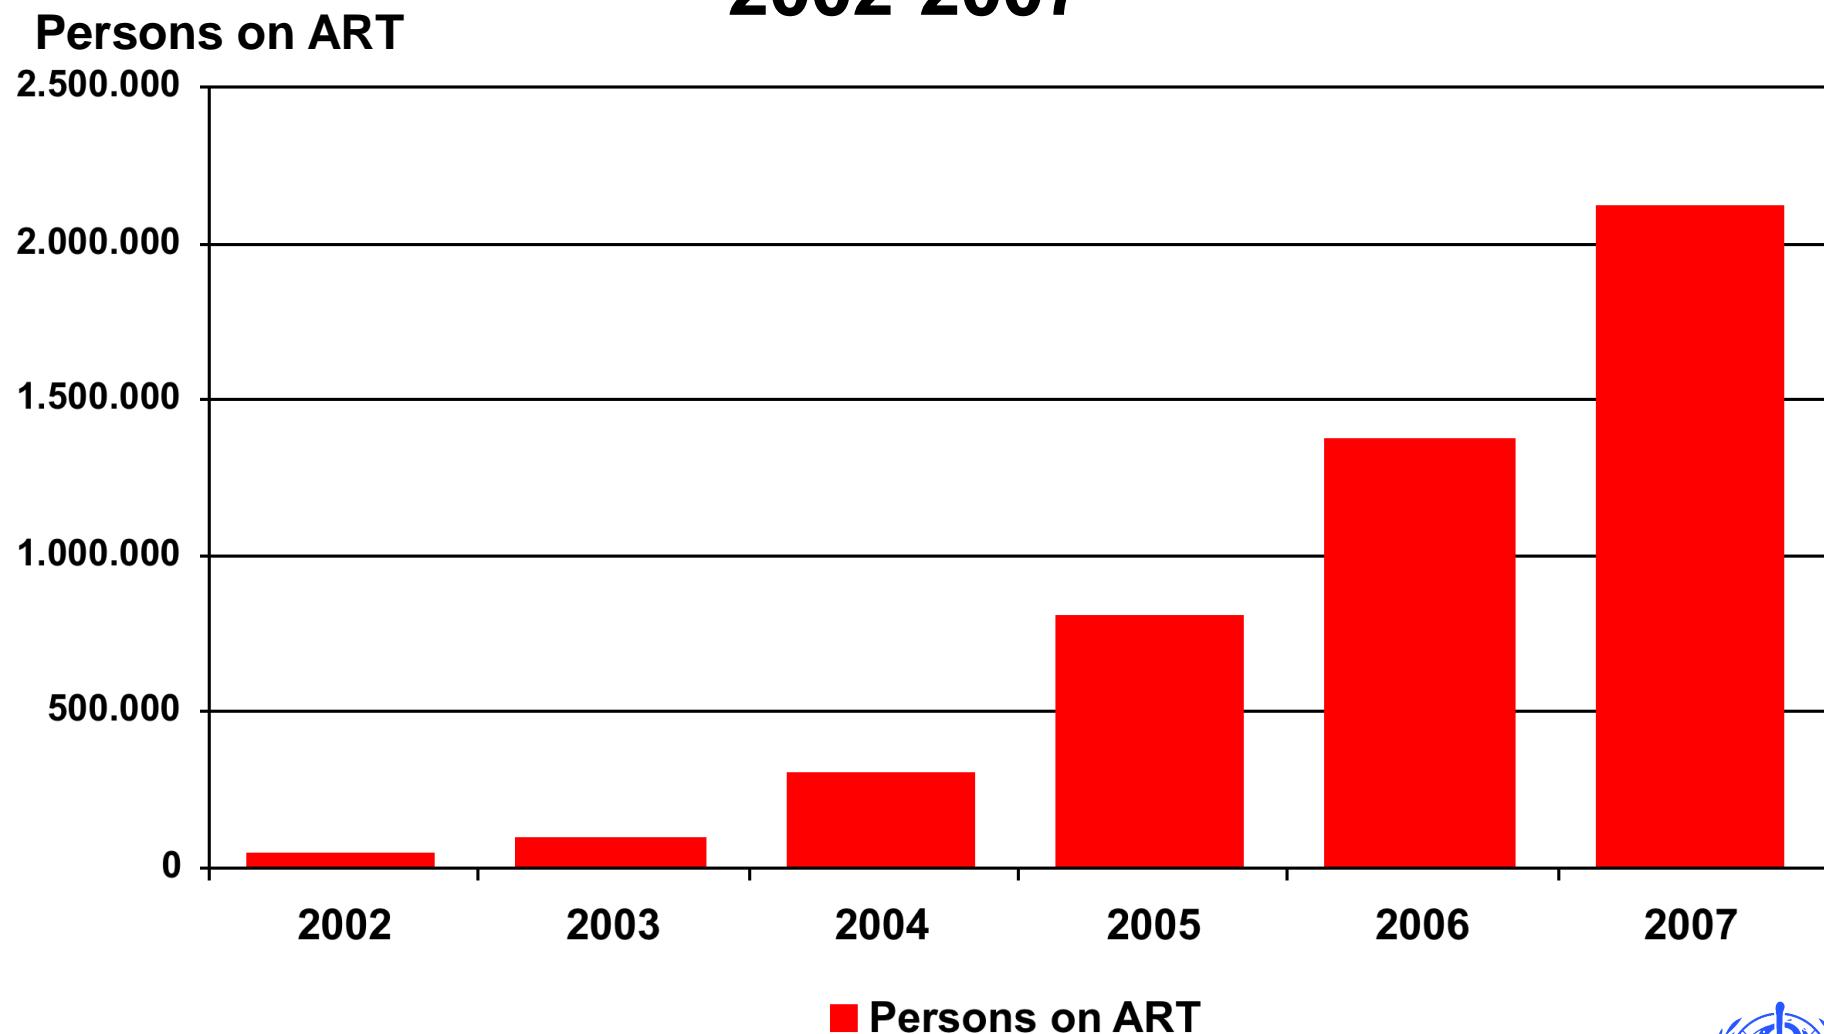

Figure adapted from Doms R, et al. Genes Dev. 2000;14:2677-2688.

# Current Thinking About ARV Therapy

- Profound impact on morbidity and mortality
- Prices are down and falling
- ARV regimens are becoming simpler
- ARV therapy is more cost effective than only treating opportunistic infections
- Not everybody needs ARV therapy
- Effective treatment facilitates prevention

# Number of persons receiving anti-retroviral treatment in sub-Saharan Africa by year, 2002-2007

Rome 4-5 October 2004***

## **The HIV Epidemic depends from several factors:**

- Nation
- City
- Village or community

**Virulence of viral strains,**

- Virus type, subtype and group
- Religious and ethical behaviours:  
traditions, marriage customs,  
circumcision practices, government and  
association involvement

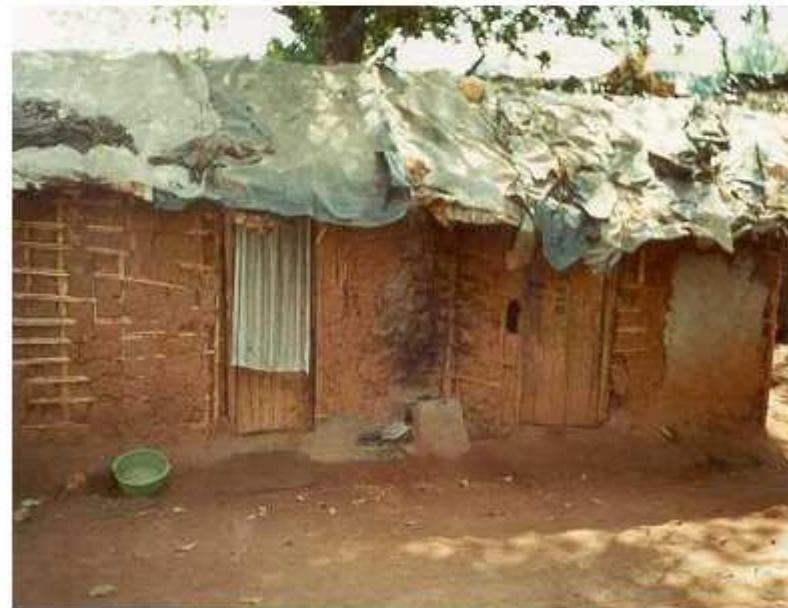

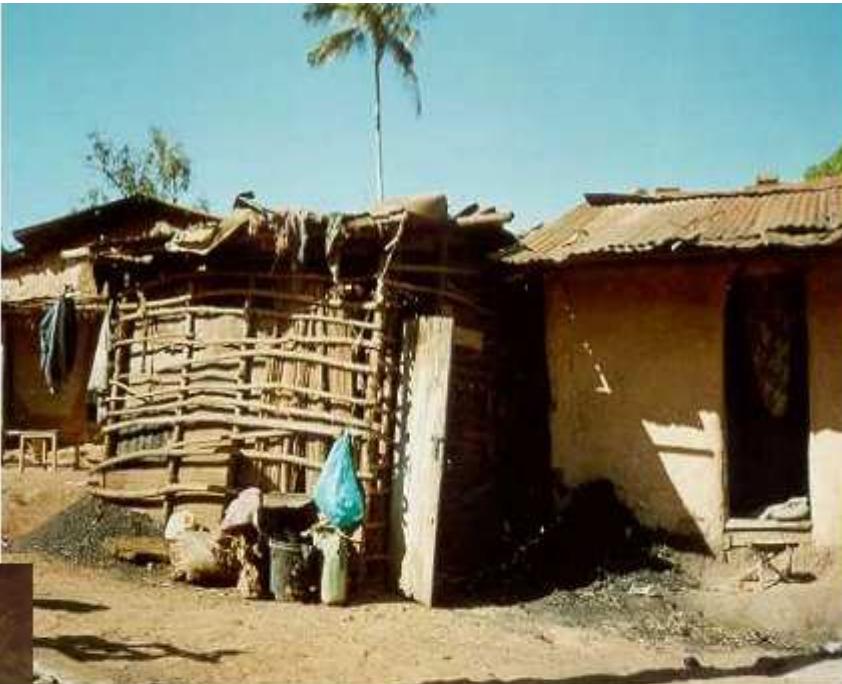

# Malnutrition

**"AIDS and poverty go hand in hand. They are twins."**

# ambiente

## **Prevention and Education**

**Specific for every country and depending on :**

- existing economic situation**
- capacities of governments and associations.**

**Avoid the same type of interventions by different associations.**

## **Positive Examples**

**Appropriate local interventions and help from the U.N. and international associations in countries such as UGANDA and SENEGAL.**

## **Focus on prevention OF HIV**

- free condoms available
- spread educational campaigns to reduce number of partners
- practice absolute fidelity
- recommend HIV screening and counselling
- reduce the marginalisation of HIV positive individuals
- provide specialised visits for sexually transmitted diseases
- treat sexually diseases in order to reduce the risk of their transmission
- Circumcision efficacy in preventing HIV transmission

## **Focus on assistance and therapy**

**Training, resources and independence to device preventive measures according local situation**

**Flexible interventions and regulation in the assistance and hospital facilities**

**Priority for better hygiene and drugs for common infections**

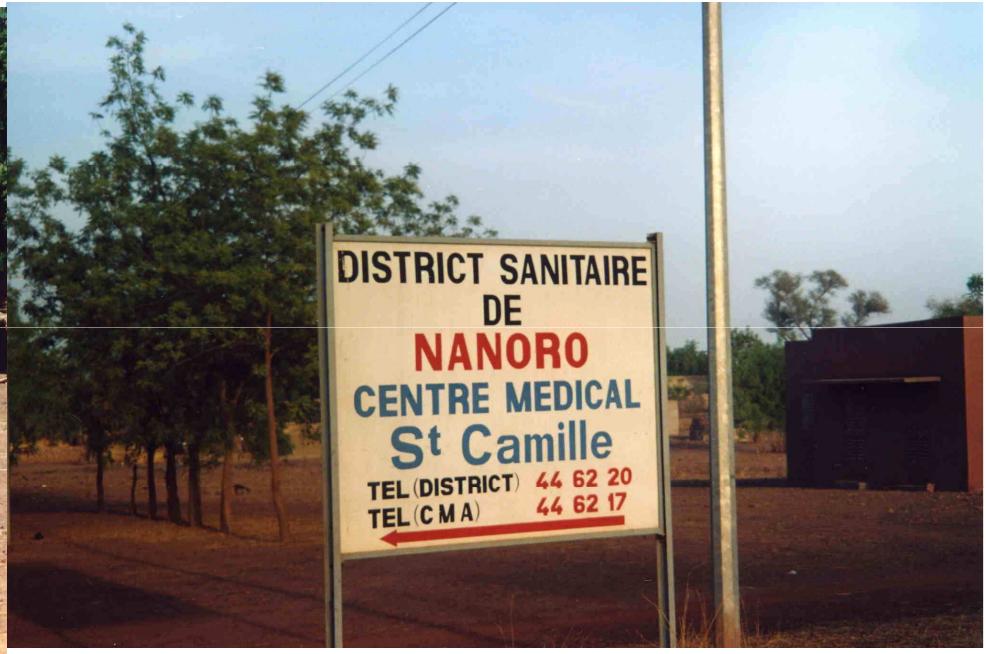

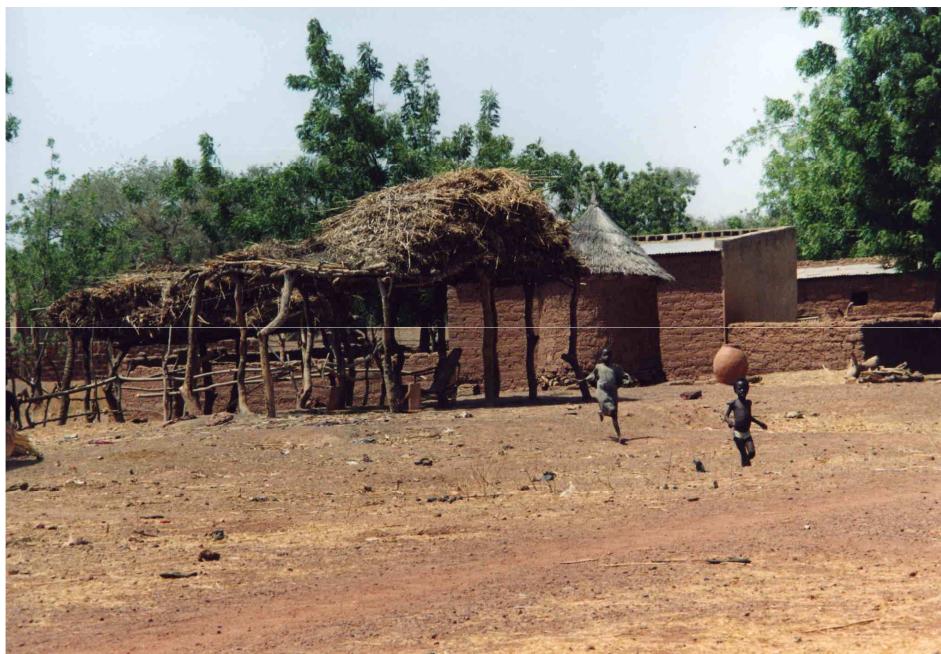

**Cheap and quicker test for diagnosis  
Developing low cost for antiretroviral drugs**

## **MIGRAZIONE e HIV/AIDS:**

**Raccomandazioni della Società Civile  
Basato sulla conferenza europea “Il  
diritto alla prevenzione, trattamento,  
cura e aiuto per i migranti e le  
minoranze etniche  
con HIV/AIDS in Europa: le  
prospettive della comunità” –  
Lisbona, 7-8 giugno 2007**

**La popolazione migrante è maggiormente esposta  
al contagio con l'HIV a causa della natura del processo migratorio.**

I gruppi più emarginati sono:  
immigrati irregolari, tossicodipendenti,  
sieropositivi, omosessuali, dediti alla prostituzione,  
vittime della tratta di esseri umani, minoranze  
etniche, detenuti e sono a rischio di sfruttamento,  
violenza ed esclusione. Questo può essere dovuto,

Anche alla elevata mobilità, status  
legale, alle difficoltà linguistiche, alla diversità  
culturale, alla disinformazione, al basso livello di  
scolarizzazione, alla mancanza di lavoro, allo  
scarso accesso ai servizi sanitari, di prevenzione e  
di riduzione del danno, all'emarginazione sociale

P. Picasso 1932 *//* sogno Collezione privata

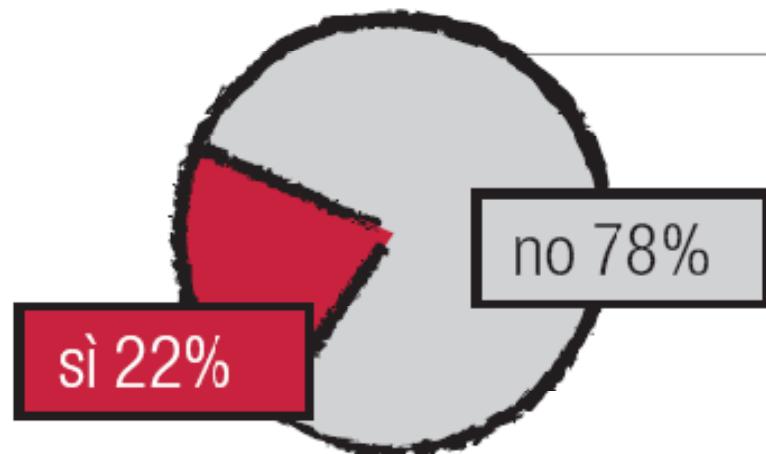

# The Ideal HIV Vaccine

- Induces cellular and humoral immune responses against virus-infected cells as well as HIV
- Induces antibodies that neutralize and do not enhance HIV infection
- Does not induce autoimmune responses
- Induces local immunity at all entry sites for HIV
- Safe with long-lasting effects at least in 50 % of subjects

# Cosa sanno i tuoi figli **DELL'AIDS?**

## Esiste un vaccino per l'AIDS?

### Percentuale di risposte corrette

#### Per sesso

Uomini 78%      Donne 78%

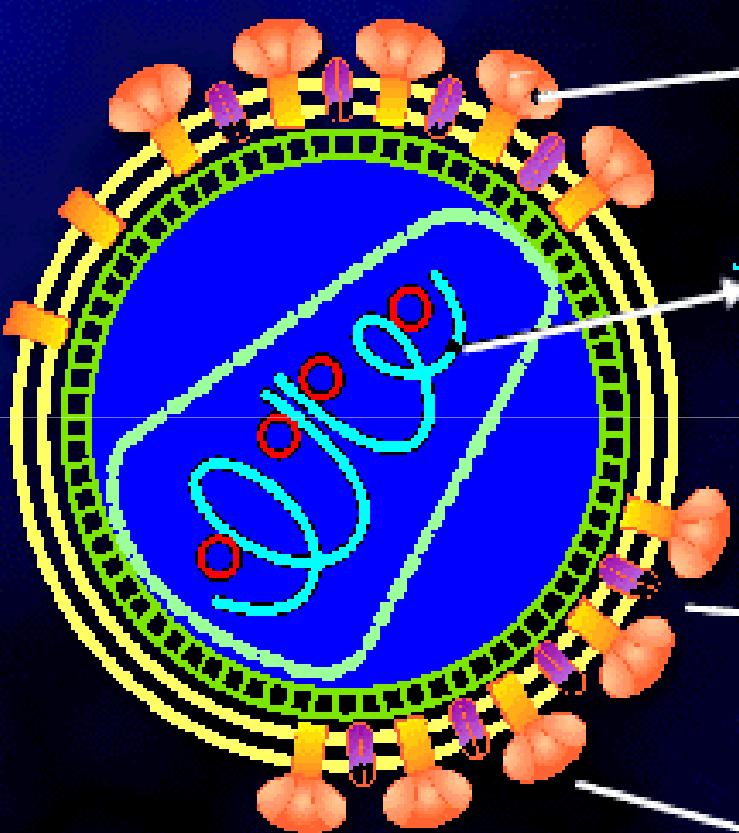

#### Per età

Giovani 77%      Adulti 84%

#### Per occupazione

Lavoratori 81%      Studenti 75%

# HIV Vaccines Approaches

— recombinant protein  
(gp120)  
— synthetic peptides(V3)

— naked DNA

— live-recombinant  
vectors  
(viral,bacterial)

— whole-inactivated  
virus

— live-attenuated  
virus

# POTENTIAL GOALS for an HIV VACCINE

- To prevent establishment of persistent HIV infection
- To significantly suppress viral load and slow the progression to AIDS
- To significantly reduce transmission of HIV, providing a public health benefit

## **CONCLUSIONI I**

UN VACCINO PREVENTIVO DELL' INFEZIONE DA HIV **NON SEMBRA AL MOMENTO REALIZZABILE NE' PREVEDIBILE.**

LE METODICHE IMMUNOLOGICHE NON CONSENTONO DI STABILIRE CHE UNA RISPOSTA ANTICORPALE O CELLULARE CORRISPONDA ALLA PRESENZA DI UN' IMMUNITÀ STERILIZZANTE E AD UNA PROTEZIONE

UNA SPERIMENTAZIONE IN FASE III DEVE ESSERE EFFETTUATA SOLO IN PAESI AD ELEVATA ENDEMIA ANCHE CON IL SOLO SCOPO DI RIDURRE LA STESSA.

La sperimentazione in fase III con vaccino gp120 ha dato un beneficio modesto di protezione dl 30 % ma solo nei primi sei mesi dalla vaccinazione.(55 soggetti nel gruppo dei vaccinati e 76 nei controlli ).

## **CONCLUSIONI II**

**UN VACCINO PREVENTIVO DELLA MALATTIA** SEMBRA INVECE PIU' REALISTICO ANCHE SE L'EFFETTO SULLA PROGRESSIONE POTREBBE ESSERE LIMITATO NEL TEMPO MA UTILE PER RISPARMIARE I FARMACI ANTIVIRALI

**UN VACCINO TERAPEUTICO DELLA INFETZIONE/MALATTIA** POTREBBE TROVARE UNA SUA BASE RAZIONALE CON SPERIMENTAZIONI ANCHE IN PAESI OCCIDENTALI USANDO SOLO COME **END POINT** LO STADIO CLINICO, IL VIRAL LOAD ED I CD4 e NON I TEST FUNZIONALI PERCHE' COMPLESSI POCO RIPRODUCIBILI E VARIABILI .  
**QUESTI VACCINI POTREBBERO DARE RISULTATI IN POCHI ANNI**

**Ma al momento non esistono dati di efficacia**

# Storia del cosiddetto “vaccino italiano” TAT terapeutico e preventivo ISS

- 2000: Sperimentazione del vaccino TAT in scimmie:risultati non riprodotti in altri centri sperimentali
- 2003-5 Sperimentazione nell'uomo fase I :critiche della comunità scientifica per come è stata condotta.Il governo va avanti...30 milioni di euro stanziati per 3 anni.....
- 2008 inizia l'arruolamento pazienti per fase II in 13 mesi....
- 2008 EDCTP (C. europeo) boccia la sperimentazione progetto in Sud Africa “IRRELEVANT TO TEST,MAY BE EITHER DANGEROUS”
- 2009 Il Sud Africa non ha ancora aderito al progetto
- 18/11/09 Congresso Anlaids R. Gallo il vaccino Tat non funziona

**DOMANDE:che fine faranno i finanziamenti ???** 39

## Conclusions

At present no **AIDS vaccine** is available and an efficient vaccine will not be ready any time soon.

**Treatment** is not only useful for the patient but also for their potential sex partners because of the reduced viral load and infectivity

Treatment should be given only if adhesion and compliance is optimal with triple therapy (HAART)

The correct therapy may reduce the emergence of resistant viral strains
